

“Veterinary Pharmacovigilance Monitoring and Recording System”

Description of technology

- The present technology in general relates to system & method for monitoring the data of Veterinary Pharmacovigilance of animals & birds for both prescribed & non-prescribed drugs given to them for treatment.
- This will have use for the veterinarian, pet owners, farmers, Pharmaceutical companies and regulatory agencies to optimized animal health.
- This technology can work using all mobile operating systems (iOS, android and other) & on Laptop, Computer, Tablet used for the purpose of veterinary Pharmacovigilance.
- It can be used for educating to the farmers and animal owners regarding the diseases, symptoms and medicines.

Key features of the technology

- Veterinarian and even chemists can register with their specifications of the drugs.
- Government regulatory and Pharma regulatory department will receive the side effects feedbacks regularly from the farmers/animal owners in the form of videos/images and simple language which can be converted into SOP.
- There is live chat option with veterinarians and or expert by Pharma Company on veterinary healthcare.

USP & Competitive advantages of the technology

- This technology helps in reporting and proper management of veterinary pharmacovigilance

Development status: First phase of project has been completed

Intellectual Property status: Patent Application has been filed

‘Seeking partners for out-licensing the technology for commercialization’.
