[Dr. Harshvardhan inaugurates the 1st Grand Challenges India \(GCI\) Meeting](#)

GCI partnership ushers in a new wave of Innovative Solutions to issues inextricably linked to Social Impact

Union Minister for Science & Technology and Earth Sciences, Dr. Harsh Vardhan presided over as Chief Guest and inaugurated the 1st Grand Challenges India (GCI) meeting here today. The meeting is being hosted by the Program Management Unit at BIRAC (PMU-BIRAC) from 21st to 24th March, 2017 and is jointly supported by Department of Biotechnology (DBT), Government of India, the Bill & Melinda Gates Foundation (BMGF) and Wellcome Trust.

The Grand Challenges India (GCI) is a mission-directed research initiative, collaboratively launched in 2012 under the umbrella of Memorandum of Understanding (MoU) between the DBT and BMGF. As India transitions from Millennium Development Goals to Sustainable Development Goals, the GCI partnership has ushered a new wave of innovative solutions to help address issues that are inextricably linked to social impact. This aims to achieve the said goals by reconnecting Science to People and available scientific data & evidences to the societal problems for finding tangible solutions.

Programs such as Grand Challenges India are providing global innovators and researchers a fantastic platform to collaborate and progress through the innovation ecosystem by developing their ideas and concepts. The PMU- BIRAC manages the complex portfolio of managing grants. The GCI provides financial support in the form of grants, cooperative agreements, and contracts to support the advancement of the GCI mission to enhance health, extend healthy lives, and reduce the burdens of poverty.

Addressing the distinguished gathering, Dr. Harsh Vardhan noted that the Department of Biotechnology and the Bill and Melinda Gates Foundation have set up a very important strategic partnership, which is working towards funding innovative solutions to societal problems not only within India but also has a reference to the developing nations. Such partnerships bring together the strength of organizations and it is important to note that through this partnership, this initiative has been able to address issues around healthcare, sanitation and human development including nutrition and maternal child health bringing nearly 45 organizations working together with a joint commitment. Shri Goyal also expressed great amount of confidence that Government of India reposts in the young scientific community and the seniors.

The GCI covers all kinds of health and developmental priorities, ranging from maternal and child health, infectious diseases, vaccines, point-of-care diagnostics, agriculture, food and nutrition to other related arenas of developing nations as per individual requirements. Most importantly, this partnership signifies a convergence between Indian and global priorities and synergistic new initiatives of the Government such as Swachh Bharat, Start-up India and others, Shri Harsh Vardhan added.

On the occasion, the Minister also released the booklet Grand Challenges India Our Journey so Far, which describes the various achievements and success stories under the initiative including the 17 innovations across India that the GCI funds.

In his keynote address, Prof. K. VijayRaghavan, Secretary DBT and Chairman BIRAC, informed that Grand Challenges India, through PMU-BIRAC, supports flagship initiatives like All Children Thriving, Agriculture & Nutrition, Reinventing Toilets and the Healthy Birth Growth & Development Knowledge Integration (HBGDki) focusing on addressing stunting and physical, immunological and cognitive development with a particular focus on South Asia. He said that Governments, research experts, innovators are a facilitator to show multiple proofs of principle for various societal problems, which then need to be scaled up by the collaboration of efforts of all stakeholders to widely apply the demonstrated solution to the problem affecting all stakeholder cohorts.

GCI promotes scientific and technological advances which aim to find solutions to key health and development challenges through research and innovation, by funding Indian researchers. Projects are selected based on national and societal need and transparent calls are made for proposals seeking the best ideas. Under this initiative, the DBT and the Gates Foundation have pledged an investment of up to US\$25 million each, over a period of 5 years.

Dr. Steven Buchsbaum, Deputy Director, Discovery & Translational Sciences, BMGF said that Grand Challenges not only seeks new ideas and new innovators to solve problems, but to be careful in defining the important problems worth solving. The GCI partnership with BIRAC provides India leadership for two goals - defining important problems to solve for India and India leadership in identifying ideas and innovators from the country to solve problems for both India and the world.

Dr. Renu Swarup, Senior Adviser, DBT and Managing Director, BIRAC said that through this meeting and future collaborations, the partners aim to build momentum for health and development initiatives via innovations and to foster scientific collaboration among national and international groups and researchers.

Other dignitaries present at the event were Dr. Soumya Swaminathan, Secretary, Department of Health Research and Director General, Indian Council of Medical Research (ICMR), Dr. Nachiket Mor, Country Director, India Office, BMGF, Dr. Shirshendu Mukherjee, Mission Director, PMU-BIRAC and other distinguished senior national and international personalities from the Ministry, BMGF, Wellcome Trust, USAID and Grand Challenges Innovators from Brazil, Canada, Bangladesh, Korea, South Africa, Kenya, Switzerland.

The Grand Challenges India (GCI) meeting was inaugurated at Ashok Hotel, New Delhi. The meeting is being hosted by Program Management Unit at BIRAC (PMU-BIRAC), jointly supported by Department of Biotechnology (DBT), Government of India; Bill & Melinda Gates Foundation and Wellcome. The meeting was inaugurated by the Union Minister for Science and Technology and Earth Sciences, Dr. Harsh Vardhan, and was attended by a large number of senior national and international dignitaries from various fields.

The Grand Challenges India (GCI) is a mission directed research initiative collaboratively launched in 2012 under the umbrella of Memorandum of Understanding (MoU) between Department of Biotechnology (DBT), Ministry of Science and Technology, Government of India and Bill and Melinda Gates Foundation (BMGF). The collaboration tries to galvanize the social impact by piloting research and extension services within a series of thematic calls and other global definite initiatives to improve public health and beyond.

“We are very pleased that the Department of Biotechnology has partnered with the Bill and Melinda Gates Foundation to set up this very important strategic partnership which is working towards funding innovative solutions to social problems not only within India but also has a reference to the developing nations. Such partnerships bring together the strength of organizations and we are happy to note that through this partnership we have been able to address issues around healthcare, sanitation and human development including through nutrition and maternal child health bringing nearly 45 organizations working together with a joint commitment. We are also happy to note that Wellcome and USAID is supporting this significant partnership,” said Dr. Harsh Vardhan, Honourable Union Minister for Science and Technology and Earth Sciences.

Grand Challenges India through PMU-BIRAC supports flagship initiatives including All Children Thriving and the Healthy Birth Growth and Development Knowledge Integration (HBGDki) focusing on addressing stunting and physical, immunological and cognitive development with a particular focus on South Asia.

“In the past two decades, we have witnessed major advances in science and technology which have transformed the country. As India transitions from the Millennium Development Goals to the Sustainable Development Goals, we must find sustainable solutions to our issues related to health and development. Programs such as Grand Challenges India are providing innovators and researchers a fantastic platform to progress through the innovation ecosystem develop their ideas and concepts,” said Prof. K.VijayRaghavan, Secretary, Department of Biotechnology, Ministry of Science and Technology, Government of India and Chairman, BIRAC.

GCI promotes scientific and technological advances which aim to find solutions to key health and development challenges through research and innovation, by funding Indian researchers. Under this initiative, the DBT and the Gates Foundation have pledged an investment of up to US\$25 million each, over a period of five years. GCI has supported and funded 18 innovators and innovations so far across various areas.

“The GCI partnership has ushered a new wave of innovative solutions to help address issues that are inextricably linked to social impact. The GCI covers all kinds of health and developmental priorities, ranging from maternal and child health; infectious diseases; vaccines; point-of-care diagnostics; agriculture; food and nutrition to other related arenas of developing nations as per requisite. Most importantly, this partnership signifies a convergence between Indian and global priorities and synergistic new initiatives of the government such as Swachh Bharat, Start-up India and others,” said Dr. Renu Swarup, Senior Adviser, DBT and Managing Director, BIRAC.

Program Management Unit housed at BIRAC, manages the complex portfolio of managing grants. The GCI provides financial support in the form of grants, cooperative agreements, and contracts to support the advancement of the GCI mission to enhance health, extend healthy lives, and reduce the burdens of poverty.

“Bill & Melinda Gates Foundation is privileged to partner with BIRAC and the Department of Biotechnology in the Grand Challenges India initiative. India is increasingly being recognized for its vast innovation potential and Grand Challenges India encourages innovative solutions and ideas to help solve important issues related to under five mortality, malnutrition, mother and child health and poverty reduction in the country,” said Dr. Nachiket Mor, Country Director, India Office, Bill & Melinda Gates Foundation.

The programs launched under GCI partnership have been shaped by experts who are luminary in their fields.

Dr. Steven Buchsbaum, Deputy Director, Discovery & Translational Sciences, Bill & Melinda Gates Foundation said that, “Grand Challenges not only seeks new ideas and new innovators to solve problems, but to be careful in defining the important problems worth solving. The GCI partnership with BIRAC provides India leadership for two goals – defining important problems to solve for India and India leadership in identifying ideas and innovators from the country to solve problems for both India and the world.

More specifically, the partnership aims to channel Indian innovation and research towards key health and development challenges and identify new prevention methods, therapies and interventions to identify solutions health issues and inequities pertaining to nutrition and development. GCI aims to adopt best practices from all partners in the quest to find and support innovations that can be scaled up to solve development problems globally.”

Through this meeting and future collaborations, the partners aim to build momentum for health and development initiatives via innovations and to foster scientific collaboration among national and international groups and researchers.

“India is currently at an exciting phase, as the massive potential available in the country is now being unleashed. GCI aims to harness this talent of Indian innovators and researchers to help identify solutions for key development challenges faced worldwide. What was sowed as a seed in the greater network of the Global Grand Challenges movement, has grown roots and branched in to a flourishing entity of its own. Today GCI now funds 17 innovations,” stated Dr. Shirshendu Mukherjee, Mission Director, Program Management Unit.

Under this initiative, the DBT and the Gates Foundation have pledged an investment of up to US\$25 million each, over a period of five years. GCI has supported and funded 18 innovators and innovations so far across various areas.

“The GCI partnership has ushered a new wave of innovative solutions to help address issues that are inextricably linked to social impact. The GCI covers all kinds of health and developmental priorities, ranging from maternal and child health; infectious diseases; vaccines; point-of-care diagnostics; agriculture; food and nutrition to other related arenas of developing nations as per requisite. Most importantly, this partnership signifies a convergence between Indian and global priorities and synergistic new initiatives of the government such as Swachh Bharat, Start-up India and others,” said Dr. RenuSwarup, Senior Adviser, DBT and Managing Director, BIRAC.

Program Management Unit housed at BIRAC, manages the complex portfolio of managing grants. The GCI provides financial support in the form of grants, cooperative agreements, and contracts to support the advancement of the GCI mission to enhance health, extend healthy lives, and reduce the burdens of poverty.

“Bill & Melinda Gates Foundation is privileged to partner with BIRAC and the Department of Biotechnology in the Grand Challenges India initiative. India is increasingly being recognized for its vast innovation potential and Grand Challenges India encourages innovative solutions and ideas to help solve important issues related to under five mortality, malnutrition, mother and child health and poverty reduction in the country,” said Dr. NachiketMor, Country Director, India Office, Bill & Melinda Gates Foundation.

The programs launched under GCI partnership have been shaped by experts who are luminary in their fields.

Dr. Steven Buchsbaum, Deputy Director, Discovery & Translational Sciences, Bill & Melinda Gates Foundation said that, “Grand Challenges not only seeks new ideas and new innovators to solve problems, but to be careful in defining the important problems worth solving. The GCI partnership with BIRAC provides India leadership for two goals – defining important problems to solve for India and India leadership in identifying ideas and innovators from the country to solve problems for both India and the world.

More specifically, the partnership aims to channel Indian innovation and research towards key health and development challenges and identify new prevention methods, therapies and interventions to identify solutions health issues and inequities pertaining to nutrition and development. GCI aims to adopt best practices from all partners in the quest to find and support innovations that can be scaled up to solve development problems globally.”

Through this meeting and future collaborations, the partners aim to build momentum for health and development initiatives via innovations and to foster scientific collaboration among national and international groups and researchers.

“India is currently at an exciting phase, as the massive potential available in the country is now being unleashed. GCI aims to harness this talent of Indian innovators and researchers to help identify solutions for key development challenges faced worldwide. What was sowed as a seed in the greater network of the Global Grand Challenges movement, has grown roots and branched in to a flourishing entity of its own. Today GCI now funds 17 innovations,” stated Dr. Shirshendu Mukherjee, Mission Director, Program Management Unit.

The Grand Challenges India (GCI) meeting was inaugurated at Ashok Hotel, New Delhi. The meeting is being hosted by Program Management Unit at BIRAC (PMU-BIRAC), jointly supported by Department of Biotechnology (DBT), Government of India; Bill & Melinda Gates Foundation and Wellcome. The meeting was inaugurated by the Union Minister for Science and Technology and Earth Sciences, Dr. Harsh Vardhan, and was attended by a large number of senior national and international dignitaries from various fields.

The Grand Challenges India (GCI) is a mission directed research initiative collaboratively launched in 2012 under the umbrella of Memorandum of Understanding (MoU) between Department of Biotechnology (DBT), Ministry of Science and Technology, Government of India and Bill and Melinda Gates Foundation (BMGF). The collaboration tries to galvanize the social impact by piloting research and extension services within a series of thematic calls and other global definite initiatives to improve public health and beyond.

“We are very pleased that the Department of Biotechnology has partnered with the Bill and Melinda Gates Foundation to set up this very important strategic partnership which is working towards funding innovative solutions to social problems not only within India but also has a reference to the developing nations. Such partnerships bring together the strength of organizations and we are happy to note that through this partnership we have been able to address issues around healthcare, sanitation and human development including through nutrition and maternal child health bringing nearly 45 organizations working together with a joint commitment. We are also happy to note that Wellcome and USAID is supporting this significant partnership,” said Dr. Harsh Vardhan, Honourable Union Minister for Science and Technology and Earth Sciences.

Grand Challenges India through PMU-BIRAC supports flagship initiatives including All Children Thriving and the Healthy Birth Growth and Development Knowledge Integration (HBGDki) focusing on addressing stunting and physical, immunological and cognitive development with a particular focus on South Asia.

“In the past two decades, we have witnessed major advances in science and technology which have transformed the country. As India transitions from the Millennium Development Goals to the Sustainable Development Goals, we must find sustainable solutions to our issues related to health and development. Programs such as Grand Challenges India are providing innovators and researchers a fantastic platform to progress through the innovation ecosystem develop their ideas and concepts,” said Prof. K.VijayRaghavan, Secretary, Department of Biotechnology, Ministry of Science and Technology, Government of India and Chairman, BIRAC.

GCI promotes scientific and technological advances which aim to find solutions to key health and development challenges through research and innovation, by funding Indian researchers. Under this initiative, the DBT and the Gates Foundation have pledged an investment of up to US\$25 million each, over a period of five years. “India is currently at an exciting phase, as the massive potential available in the country is now being unleashed. GCI aims to harness this talent of Indian innovators and researchers to help identify solutions for key development challenges faced worldwide. What was sowed as a seed in the greater network of the Global Grand Challenges movement, has grown roots and branched in to a flourishing entity of its own. Today GCI now funds 17 innovations,” stated Dr. Shirshendu Mukherjee, Mission Director,

Program Management Unit.

The Grand Challenges India (GCI) meeting was inaugurated at Ashok Hotel, New Delhi. The meeting is being hosted by Program Management Unit at BIRAC (PMU-BIRAC), jointly supported by Department of Biotechnology (DBT), Government of India; Bill & Melinda Gates Foundation and Wellcome. The meeting was inaugurated by the Union Minister for Science and Technology and Earth Sciences, Dr. Harsh Vardhan, and was attended by a large number of senior national and international dignitaries from various fields.

The Grand Challenges India (GCI) is a mission directed research initiative collaboratively launched in 2012 under the umbrella of Memorandum of Understanding (MoU) between Department of Biotechnology (DBT), Ministry of Science and Technology, Government of India and Bill and Melinda Gates Foundation (BMGF). The collaboration tries to galvanize the social impact by piloting research and extension services within a series of thematic calls and other global definite initiatives to improve public health and beyond.

“We are very pleased that the Department of Biotechnology has partnered with the Bill and Melinda Gates Foundation to set up this very important strategic partnership which is working towards funding innovative solutions to social problems not only within India but also has a reference to the developing nations. Such partnerships bring together the strength of organizations and we are happy to note that through this partnership we have been able to address issues around healthcare, sanitation and human development including through nutrition and maternal child health bringing nearly 45 organizations working together with a joint commitment. We are also happy to note that Wellcome and USAID is supporting this significant partnership,” said Dr. Harsh Vardhan, Honourable Union Minister for Science and Technology and Earth Sciences.

Grand Challenges India through PMU-BIRAC supports flagship initiatives including All Children Thriving and the Healthy Birth Growth and Development Knowledge Integration (HBGDki) focusing on addressing stunting and physical, immunological and cognitive development with a particular focus on South Asia.

“In the past two decades, we have witnessed major advances in science and technology which have transformed the country. As India transitions from the Millennium Development Goals to the Sustainable Development Goals, we must find sustainable solutions to our issues related to health and development. Programs such as Grand Challenges India are providing innovators and researchers a fantastic platform to progress through the innovation ecosystem develop their ideas and concepts,” said Prof. K.VijayRaghavan, Secretary, Department of Biotechnology, Ministry of Science and Technology, Government of India and Chairman, BIRAC.

GCI promotes scientific and technological advances which aim to find solutions to key health and development challenges through research and innovation, by funding Indian researchers. Under this initiative, the DBT and the Gates Foundation have pledged an investment of up to US\$25 million each, over a period of five years. GCI has supported and funded 18 innovators and innovations so far across various areas.

“The GCI partnership has ushered a new wave of innovative solutions to help address issues that are inextricably linked to social impact. The GCI covers all kinds of health and developmental priorities, ranging from maternal and child health; infectious diseases; vaccines; point-of-care diagnostics; agriculture; food and nutrition to other related arenas of developing nations as per requisite. Most importantly, this partnership signifies a convergence between Indian and global priorities and synergistic new initiatives of the government such as Swachh Bharat, Start-up India and others,” said Dr. RenuSwarup, Senior Adviser, DBT and Managing Director, BIRAC.

Program Management Unit housed at BIRAC, manages the complex portfolio of managing grants. The GCI provides financial support in the form of grants, cooperative agreements, and contracts to support the advancement of the GCI mission to enhance health, extend healthy lives, and reduce the burdens of poverty.

“Bill & Melinda Gates Foundation is privileged to partner with BIRAC and the Department of Biotechnology in the Grand Challenges India initiative. India is increasingly being recognized for its vast innovation potential and Grand Challenges India encourages innovative solutions and ideas to help solve important issues related to under five mortality, malnutrition, mother and child health and poverty reduction in the country,” said Dr. NachiketMor, Country Director, India Office, Bill & Melinda Gates Foundation.

The programs launched under GCI partnership have been shaped by experts who are luminary in their fields.

Dr. Steven Buchsbaum, Deputy Director, Discovery & Translational Sciences, Bill & Melinda Gates Foundation said that, “Grand Challenges not only seeks new ideas and new innovators to solve problems, but to be careful in defining the important problems worth solving. The GCI partnership with BIRAC provides India leadership for two goals – defining important problems to solve for India and India leadership in identifying ideas and innovators from the country to solve problems for both India and the world.

More specifically, the partnership aims to channel Indian innovation and research towards key health and development challenges and identify new prevention methods, therapies and interventions to identify solutions health issues and inequities pertaining to nutrition and development. GCI aims to adopt best practices from all partners in the quest to find and support innovations that can be scaled up to solve development problems globally.”

Through this meeting and future collaborations, the partners aim to build momentum for health and development initiatives via innovations and to foster scientific collaboration among national and international groups and researchers.

“India is currently at an exciting phase, as the massive potential available in the country is now being unleashed.
